Version 1.0, February 14, 2022

Outline

Latent Semantic Indexing

Motivation

In information retrieval, a common task is to obtain from many documents that subset which best matches a query

Motivation

In information retrieval, a common task is to obtain from many documents that subset which best matches a query

→ Typical feature representations of documents are then term-document matrices:

Motivation

In information retrieval, a common task is to obtain from many documents that subset which best matches a query

- → Typical feature representations of documents are then term-document matrices:
- → These matrices are typically huge but sparse

How to identify those feature dimensions (or combinations thereof) which are most meaningful?

Singular Value Decomposition

Any $m \times n$ matrix C can be represented as a singular value decomposition in the form $C = U \Sigma V^T$ where

 \bigcup m × m matrix: columns are the orthogonal eigenvectors of CC^T

 \vee $n \times n$ matrix; columns are the orthogonal eigenvectors of C^TC

 Σ Diagonal Matrix with $\Sigma_{ii} = \sqrt{\lambda_i}$; $\Sigma_{ii} = 0, i \neq i$

Singular Value Decomposition

Any $m \times n$ matrix C can be represented as a singular value decomposition in the form $C = U\Sigma V^T$ where

- $\bigcup m \times m$ matrix; columns are the orthogonal eigenvectors of CC^T
- \vee $n \times n$ matrix; columns are the orthogonal eigenvectors of C^TC
- Σ Diagonal Matrix with $\Sigma_{ii} = \sqrt{\lambda_i}$; $\Sigma_{ii} = 0, i \neq j$

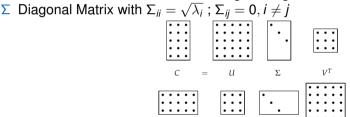

Singular Value Decomposition

Any $m \times n$ matrix C can be represented as a singular value decomposition in the form $C = IJ\Sigma V^T$ where

 \bigcup m × m matrix; columns are the orthogonal eigenvectors of CC^T

 \vee $n \times n$ matrix; columns are the orthogonal eigenvectors of C^TC

→ First k eigenvectors map document vectors to lower dimensional representation It can be shown that this mapping resuls in the k-dim, space with smallest distance to the original space

Example

	d_1	d_2	d_3	d_4	d_5	d_6
ship	1	0	1	0	0	0
boat	0	1	0	0	0	0
ocean	1	1	0	0	0	0
voyage	1	0	0	1	1	0
trip	0	0	0	1	0	1
